AOSMTO - Access Of Static Members Through Objects

804

Static members should be referenced through class names rather than through objects.

Enterprise JavaBeans deployment expert

✓ Select the application server platform for deploying your EJB from the list of supported servers

Weblogic Application Server 5.1

✓ You can optionally compile EJB classes and generate a deployment descriptor during this process. On some servers, you can optionally "hot" deploy. You can also opt to delete temporary files after deployment. Check the options you want below

Process options

☒ Add libraries, required for deployment, to the project Search/Classpath 4504

☒ Verify/Correct EJB sources for compliance with WLS5.1 requirements 4506

☒ Compile classes from the selected diagram 4508

☒ Generate Deployment Descriptor 4510

☒ Open XML Editor for the generated DD 4512

☐ Process Servlet(s)

☒ Hot Deploy (use "Start Weblogic Application Server 5.1" or start the server manually)

☒ Generate simple JSP client 4514

☒ Clear temp folder before start

☒ Clear temp folder after finish
